## Flight Controller Set Preparation • Firmware: CleanFlight(≥2.1.0) or BetaFlight Firmware (coming soon) • Any available UART interface on the Flight Controller 1. Connect the RunCam Split with the UART interface of the Flight Controller UART Interface RX ΤX ΤX RX

For example, we connect the Split to the UART 3 interface on the Flight Controller:

the Flight Controller. (Open up the configurator that matches the firmware you are

connect the Flight Controller to the computer, then open the configurator software of

running, Betaflight Configurator for Betaflight, Cleanflight Configurator for Cleanflight).

In the Peripherals column of the line UART3 (on the Ports tab), select RunCam Split and

Note: not all combinations are valid. When the flight controller firmware detects this the serial port configuration will be reset.

Note: Do NOT disable MSP on the first serial port unless you know what you are doing. You may have to reflash and erase your configuration if you do.

UART3

2. Make the Flight Controller recognize the Split

In the Flight Controller Configurator, navigate to the Modes tab. There are new CAMERA WI-FI, CAMERA POWER and CAMERA CHANGE modes. • CAMERA WI-FI: turn on/off the WIFI of the camera. When in the OSD of the camera, this is used to confirm your selection. • CAMERA POWER: start/stop the video. When in the OSD of the camera, this is used to move to the next menu item. • CAMERA CHANGE MODE: switch among the three modes, video, photo and OSD

setting mode. When in the OSD of the camera, this will exit the menu.

Assign any available channel to the function you need, for example:

• Assign the AUX3 to the CAMERA CHANGE MODE, range 1900-2100

• Assign the AUX1 to the CAMERA WI-FI, range 1900-2100

• Assign the AUX2 to the CAMERA POWER, range 1900-2100

3. Instructions of the functions of the camera and assigning transmitter
